

NORTHWEST CAREER COLLEGES FEDERATION
Training Workshop

Wednesday, May 17th

1:00 pm to 5:00 pm

Doubletree Hotel – Seattle Southcenter

Active Shooter and Critical Incident Response

Preparing for the Unthinkable

Schools have the responsibility to train staff and faculty with the skills and ability to defend students during an unthinkable scenario – an active shooter on campus. Fortunately this training exists and will help protect your students and faculty.

This is the world we're living in now, and thinking "this would never happen at my school" is naïve and irresponsible. Is your answer to somehow get your students to evacuate, run and hide? Good luck with the victim mentality. The other option is to fortify and defend those who cannot evaluate safely. Which would you prefer? **Knowledge, training and planning wins every time.**

"Gap" training focuses on the time span from the first shot fired to the time the police arrive, enter and make contact with the suspect(s). The "gap" time has a national average of 10-14 minutes when the staff and students are on their own. Police are trained and equipped to stop the shooter but are almost never there during this "gap" period.

We will be offering this training in two phases. Phase 1 is a four hour block of training, demonstrating lock downs and active shooter scenarios. We will deal with the mindset needed to protect and proceed, the reality of a real world active shooter situation and what to expect beyond the training room. Your presenter will provide all the necessary training equipment. Those that wish not to participate can watch the drills. This will cover how to properly barricade entrances and also how to effectively stop active shooters by using effective tools and understanding some of the predicable common behavioral patterns.

This training will be held as a workshop on May 17th from 2:00 pm-5:30pm. Register below.

Phase II delivers hands-on demonstration, offered in a 45 minute breakout on May 18th as part of the Annual Conference. This portion is where the attendees will walk through active shooter scenarios and be given the opportunity to implement the tools discussed in Phase 1.

Participants will see why the "Gap" training system is critical component in not only surviving an active shooter scenario but effectively stopping an active shooter so others will survive. "Gap" is

"This one of the most important training sessions we've had at Perry. It's essential for the safety of students and staff."

*Christine Cote
President, Perry Tech*

now one of the leading active shooter response trainings in the United States. This training will change the way you look at how to deal with an Active Shooter and does not require any specialized background or training to accomplish

ABOUT THE PRESENTER

Jon Ladines is the founder of Force Dynamics Security Consulting, a training company that deals primarily with Active Shooter-Critical Incident Response training for schools, hospitals and churches nationwide. He spent 15 years in law enforcement as a Washington State Trooper and a Richland police officer, serving on two SWAT teams before leaving to run the Force Dynamics training program full time.

While in law enforcement, Jon served as a Firearms and Defensive Tactics instructor, Academy instructor and has an extensive background in Counter Terrorism training.

Gap Training has been a highly successful program in dealing with the issues surrounding Active Shooter scenarios, changing lock down procedures and changing the mindset of school staff into a defensive mindset rather than the concept of Run, Hide, and Fight which keeps the mind in a victim mentality.
